AutoCAD vs. AutoCAD LT AutoCAD is an established and popular desktop CAD product, while AutoCAD LT is a newer and less expensive desktop CAD product. AutoCAD LT was introduced in 2005 as a low-cost alternative to AutoCAD, aimed at schools and individuals to bring CAD applications to market. AutoCAD LT is available as a standalone application, or in a value-added bundled form with AutoCAD. AutoCAD LT users can import, export and also create and modify 2D drawings. AutoCAD LT users can also create 3D drawings and perform 2D editing functions such as line and arc, but not 3D modeling and editing. AutoCAD LT and AutoCAD share similar user interfaces and commands, while AutoCAD has its own separate user interfaces and commands. AutoCAD LT's differences to AutoCAD include a command-line interface, web browser-based user interface and small computer language (macro) editor. Table of Contents Features Basic Features AutoCAD and AutoCAD LT share the same general features, although some functions have been split between the two. Some of the main features include: Drafting The main feature of AutoCAD is drafting. This includes 2D drafting, 3D modeling and schematic design. A "parametric" solver is also provided which is useful for model-based design. Pricing One of the main reasons that AutoCAD is considered to be a "pro" product is the high price tag. AutoCAD LT is available at a much cheaper price, while retaining some of the functionality of AutoCAD. Functionality AutoCAD and AutoCAD LT are both capable of producing very detailed and complex drawings, although the features and complexity vary depending on the version. Both AutoCAD and AutoCAD LT are considered to be very advanced products for CAD, offering a number of innovative features and drawing tools. Usability AutoCAD has a large selection of features and functions, but it can be difficult to use for less experienced users. The price of the product also often makes it impractical for users to pay for individual functions. Anisotropic Filtering The function of anisotropic filtering (AF) is to enable hardware vendors to present a higher rendering quality on their 3D graphics hardware than the default bilinear filtering algorithm used by the previous AutoCAD versions. It uses some optimization methods to prevent the creation of pixel-gouging, but it also introduces a considerable blurriness to the image.
