WakeRemote4J is a very lightweight application completely written in Java and designed to help you remotely power up workstations

What's New In WakeRemote4J?

WakeRemote4J works over the Internet, so you can remotely power up workstations. It is a very lightweight application completely written in Java and designed to help you remotely power up workstations. The target systems can be connected on the same LAN, but it also works over the Internet. In addition, you can optionally create scheduled tasks that will power up your targets at certain times. WakeRemote4J requires a server on the network which will connect to your remote targets and wake them up. In addition, you must have an OpenVPN or IPSec VPN connection from your remote site (if you do not have an IPSec VPN from the remote site, it is not possible to use WakeRemote4J). For security reasons, WakeRemote4J will not wake up systems on the local network. WakeRemote4J will wake up workstations on a remote network and connects to the network using Microsoft's RDP service. This is the same method used by other WakeOnLan utilities. To power on a remote system, simply enter the system's IP address or DNS name in the appropriate location. Notice that WakeRemote4J will not wake up remote systems on the local network. Therefore, you will have to have an OpenVPN or IPSec VPN connection from your remote site to remote servers on your network. Features: Remote wakeup Scheduled tasks Multiple connections Internet Local networks Requirements: Download WakeRemote4J 0.1.0. You will also need a WakeOnLan enabled NIC on the computer being woken, along with a NIC on the local network that has WakeOnLan enabled. The default credentials will be Admin:Pwd. For security reasons, WakeRemote4J will not wake up systems on the local network. Therefore, you will have to have an OpenVPN or IPSec VPN connection from your remote site to remote servers on your network. For security reasons, WakeRemote4J will not wake up remote systems on the local network. Therefore, you will have to have an OpenVPN or IPSec VPN connection from your remote site to remote servers on your network. For security reasons, WakeRemote4J will not wake up remote systems on the local network. Therefore, you will have to have an OpenVPN or IPSec VPN connection from your remote site to remote servers on your network. For security reasons, WakeRemote4J will not wake up remote systems on the local network. Therefore, you will have to have an OpenVPN or IPSec VPN connection from your remote site to remote servers on your network. Download WakeRemote4J 0.1.0 and double-click the WakeRemote4J.exe file to start the setup wizard. Select the appropriate software source and click Next. You may be prompted to install additional components. Click Install.

System Requirements For WakeRemote4J:
